Quick Installation Guide

1. Connect to the BBNA via a PC by typing 192.168.254.99 in your browser after access has been gained through the Ethernet port of the device.

2. Once connected, please use the GUI to navigate through the menus and configure your device. Please refer to the Product User Manual for details on the menu options. The most important section for initial configuration is the HOME tab, and specifically the Wired WAN interfaces. The other tabs are for optional & advanced setups.

3. If help is required, refer to our Support Portal for hints & assistance: http://support.mushroomnetworks.com, or send an email to: support@mushroomnetworks.com.

4. If you will be using our monthly fee-based optional BBS (Broadband Bonding Service) to operate your unit in "peered mode," then once your unit is online contact Seth at 858-452-1031 extension 6010.
